Training

Mastering Data Structures using Java: Concepts to Real-World Applications **Jun '26 – Jul '26**

Centre for Professional Enhancement, Lovely Professional University **Certificate Link**

- Strengthened proficiency in Data Structures and Algorithms using Java, including arrays, linked lists, stacks, queues, searching, sorting, and algorithmic problem-solving.
- Practiced Java-based implementation and problem-solving exercises, focusing on applying data structures to practical programming scenarios and improving algorithmic thinking.
- Earned an O Grade (90% and above) along with a Certificate of Merit for performance during the training programme.

Projects

AutoCare Vehicle Service Management System / *Java, Swing, JDBC, SQLite* **Jul'26**

- Engineered a Java-based desktop application spanning 7 core modules — customers, vehicles, mechanics, services, bookings, billing, and service records — through a unified graphical interface.
- Integrated Java Swing, JDBC, and SQLite with modular UI, controller, model, database, and utility components for maintainable application architecture.
- Implemented CRUD operations, searching, validation, invoice generation, CSV export, and database backup/restore using core data-structure concepts.
- **Github Repository Link: GitHub Link**

Real-Time Loan Eligibility Advisor / *React.js, Python, Flask, Scikit-learn* **Jun'26**

- Developed a real-time loan eligibility advisor using 5 machine-learning models with a Voting Ensemble to assess applicant and loan information.
- Trained Logistic Regression, Decision Tree, Random Forest, Gradient Boosting, and Neural Network models for eligibility prediction and comparative analysis.
- Connected the trained models to a React frontend via a Python Flask backend, delivering instant eligibility predictions and model-based insights.
- **Github Repository Link: GitHub Link**

Deadlock Prevention Kit / *HTML, CSS, JavaScript, Operating Systems* **May'26**

- Created an interactive deadlock prevention toolkit built around 3 core modules — safety checking, deadlock detection, and recovery simulation — using Banker's Algorithm.
- Visualized process-resource allocation states and identified deadlocked processes through resource-allocation analysis and step-by-step algorithm logs.
- Simulated recovery strategies including process termination, resource preemption, and rollback to demonstrate practical deadlock resolution.

Certifications

Gen AI — NASSCOM Skill Development Program **Mar '26**

SFJ Business Solutions — Certificate Link

Oracle Cloud Infrastructure Certified AI Foundations Associate **May '26**

Oracle University — Certificate Link

Oracle Data Platform Certified Foundations Associate **May '26**

Oracle University — Certificate Link

Cyber Security Essentials **Mar '25**

Tech Veda — Certificate Link

Technical Skills

Languages: Java, Python, SQL, JavaScript, HTML, CSS

Technologies/Frameworks: React.js, Flask, Scikit-learn, Pandas, NumPy, Matplotlib

Tools/Platforms: Git, GitHub, VS Code, MySQL, SQLite

Soft Skills: Problem-Solving, Teamwork, Communication, Adaptability

Education

Lovely Professional University **2024 – 2028**

Computer Science and Engineering — CGPA: 7.94 *Phagwara, Punjab*

RPM Academy (CBSE) **2022 – 2023**

Intermediate (PCM) — Percentage: 86% *Gorakhpur, U.P*

RPM Academy (CBSE) **2020 – 2021**

Matriculation — Percentage: 94.6% *Gorakhpur, U.P*
